

AUTOMATIC DEHUMIDIFIER DISCONNECT (ADD)

The ADD Control cuts power to your dehumidifier automatically if your condensate pump fails. It can be used with any condensate pump that features a normally-closed safety overflow switch.

INSTRUCTIONS FOR USE

- 1). Plug dehumidifier into corded receptacle from ADD marked “dehumidifier”
- 2). Connect the low voltage leads from the ADD to the low voltage leads on the condensate pump (for safety overflow switch)
- 3). Plug ADD control into any standard 115V electrical outlet with cord marked “outlet”
- 4). Turn on dehumidifier

If the pump should fail and safety switch overflow float engages to open the low-voltage circuit – the ADD will cut power to the dehumidifier.

Note: 13 AMPS Max Capacity
