

Round Self-Regulating Fresh Air Inlet

The AIRLET 200 offers unparalleled performance in the regulation of airflow. Its unique design assures draft-free fresh air. An interior grille which may be oriented as necessary is an added advantage. A round design permits easy installation after the interior and exterior surfaces have been applied. One standard telescoping sleeve accommodates wall dimensions from 5" to 9" thick, surface to surface. Additional lengths may be ordered as special. A rough opening of 5-1/8" is required.

The AIRLET 200 is available with either a white epoxy painted exterior grille or a mill finish aluminum exterior grille, which may easily be painted. The interior grille is made of white plastic and stands only 5/8" off from the wall. It is easily removed without tools to access a filter provided in the sleeve. There are no manual controls to worry about or remember to reset.

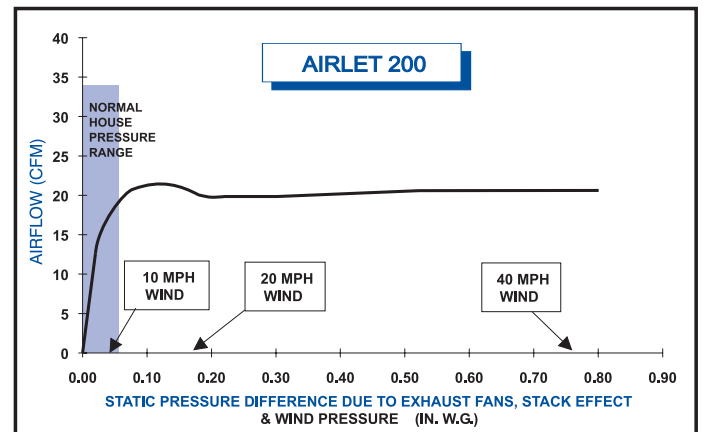

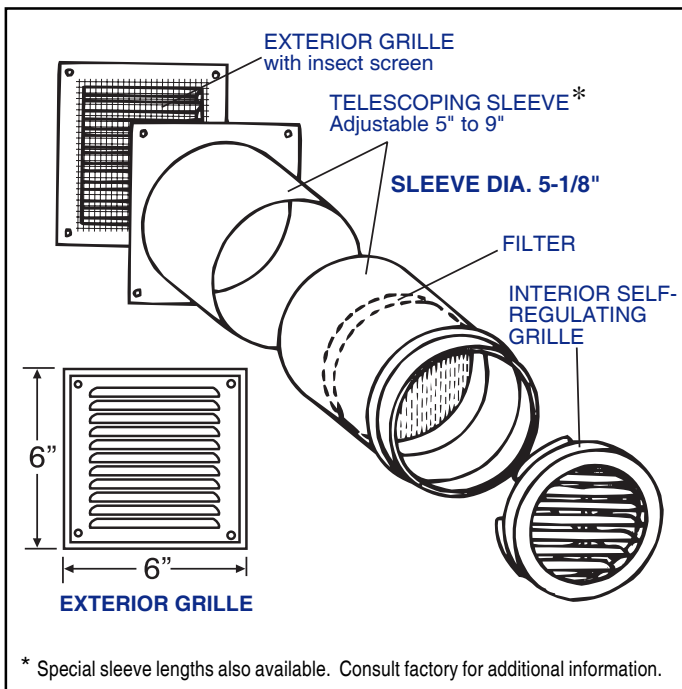

TO ORDER:

- # 11 555 Airlet 200 with White Exterior Grille
- # 11 556 Airlet 200 with Aluminum Exterior Grille

Accessories:

- # 23 853 Replacement Filter
- # 11 600 5 1/4" Hole Saw

Note: Airlet 200's may be provided without exterior grilles in the case of under-the-siding installations. Consult your dealer for additional information.

The AIRLET 100 and AIRLET 200 make-up air inlets are self-regulating. The controlling element is a plastic damper that automatically adjusts the free opening to provide a draft-free regulated amount of incoming air independent of wind pressure. (See performance charts).
