

# fresh AIRLET TL98

## Manually Adjustable Fresh Air Inlet

The *Airlet Model TL98* manually adjustable fresh air inlet incorporates a unique variable precision control damper that provides superior comfort control for the user. The damper is manually adjusted using a discreet slide control accessible from behind the front cover, which prevents unwanted tampering.

An aesthetically pleasing interior grille is both attractive and multi-functional. The slightly arched grille face and horizontal lower slot take advantage of air currents to provide condensation protection. Superior air distribution pattern ensures draft-free performance.

Every Airlet *TL98* includes a permanent easily accessed washable filter, expandable wall sleeve, and exterior louver. The white color blends well with any decor and is cleaned simply with a damp cloth. Optional pollen filters and sound absorbing wall sleeves are also available.
