

Installation instructions
refrigerator filter

Model: ECF-6035CS

Compatibility

Compatible with refrigerators, dispensers, ice makers, RVs, motor homes, boats, and so on.

Accessories list

- a. Filter
- b. 1/4" compression and push-to-connect fitting (adapter fitting)
- c. 1/4" compression hex nut, sleeve, and insert
- d. 1/4" PE tubing
- e. Clips and screws
- f. Cable tie mounts and cable ties

Installation instructions (Take refrigerator as an

Step 1
Turn off the refrigerator water supply valve and turn on the refrigerator dispenser to ensure that there is no residual water.

Step 2
Remove the refrigerator water supply pipe from the refrigerator joint and connect the pipe to the adapter fitting. Wrap some Teflon tape on the external thread while

Step 3
Connect the adapter fitting to the filter inlet. (The inlet is on the cap side with "IN")

Step 4
Take out the 1/4" PE tubing, install the hex nut, sleeve, and insert in the proper order. Connect the 1/4" PE tubing to the refrigerator joint. Wrap some Teflon tape on the external thread while connecting and then tighten it with a

Step 5
Put a bucket or basin at the filter outlet, open the water supply valve, and flush the filter for 5 minutes. It is normal to see black water while flushing.

Step 6
Connect the 1/4" PE tubing to the filter outlet.

Step 7
Select suitable fittings to fix the filter.

Option 1-Bracket: Select the proper position on the cabinet wall and install the bracket. Then push the filter into the bracket.

Option 2-Cable tie mounts: Take out 4 cable tie mounts and select the proper position on which to paste them. Then thread the cable ties into the cable tie mounts to fix the filter.

Other installation situations

A: If an inline water filter has been installed before and is connected to the braided stainless steel hoses, remove the hoses from your original filter's inlet and outlet. Insert two adapter fittings into the inlet and the outlet of our filter. Screw the braided stainless steel hoses on the adapter fittings.

B: If an inline water filter has been installed before and is connected to 1/4" PE pipes with quick-connect fittings, remove the tubes from your original filter's inlet and outlet. Connect 1/4" PE pipes to our filter.

Frequently asked questions:

Q: What should I do if water leaks at the connection after installing the filter?

A: Turn off the cold water valve and check the water leakage. 1) If the water leakage is at the connections between the refrigerator water supply pipe and the adapter fitting, wrap some Teflon tape on the adapter fitting; 2) If the water leakage is at the connection at the inlet of the refrigerator, tighten the hex nut, sleeve, insert, and refrigerator joint with a wrench; 3) If the water leakage is at the inlet or outlet of the filter, make sure the PE tubing and adapter fitting are inserted to the end.

Q: Why does the water sometimes smell bad?

A: Bacteria can easily grow in the water when you are on vacation or do not use the filter for several days. When you use it again, you will need to flush it for a while before you drink, to drain the internal deposited water.

Q: Does the filter need to be flushed after installation?

A: Yes, it is recommended that you turn on the faucet and flush the filter for 5 minutes after installation. The filter media has coconut shell activated carbon, so you may see black water while you flush.

⚠ WARNING:

⚠ To reduce the risk of property damage due to water leakage, this filter MUST be installed in accordance with the manufacturer's specifications and instructions.

⚠ This filter unit must be replaced every 5,000 gallons or 5 years.

⚠ Do not use this product at temperatures under 32 °F/0 °C. Otherwise, the product will freeze. Failure to follow instructions and operating specifications will void your warranty. Further, manufacturer assumes no responsibility or liability for damages arising out of misuse of the product.
