Therma-Stor Products developed

the first HI-E DRY dehumidifier in the late 1980s. Utilizing the patented Revaporator process, this unit removed more than twice the amount of water per kilowatt hour of electricity than any other refrigerant dehumidifier.

HI-E DRY dehumidifiers are designed and built with emphasis on efficiency and durability. Today's HI-E Dry dehumidifiers remove up to seven pints of water per kilowatt hour, while the industry average remains at only two to three pints.

The high-efficiency design of HI-E DRY dehumidifiers offer more than just dramatically reduced utility costs. The larger water removal capacity from a smaller, more efficient refrigeration system eliminates the need for 220 volt circuits in many applications. The smaller refrigeration system allows HI-E DRY dehumidifiers to cost less than other commercial dehumidifiers of equal capacity.

Original HI-E DRY I.C.U. dehumidifier with patented "revaporator" technology.

HI-E DRY Models 100 and 195 high efficiency dehumidifiers utilize refrigeration to cool the incoming air stream below its dew point as it passes through the dehumidification (evaporator) coil. This cooling results in the removal of moisture (latent heat) and reduction in temperature (sensible heat). The cooled and dried air is used to pre-cool the incoming air stream resulting in up to a 200 percent increase in overall efficiency. After the pre-cooling stage the processed air is reheated by passing through the condenser coil. The latent heat removed by the evaporator coil is returned to the air stream at this stage as sensible heat, resulting in an overall temperature increase from the incoming air.

#### **Features:**

- The 100 and 195 are controlled by a dehumidistat with settings from 20 to 80 percent relative humidity and a positive "on" and "off" setting.
- The 100 and 195 contain a blower switch that permits continuous blower operation independent of dehumidification.
- · Portable and provided with four casters.
- The HI-E DRY 100 and HI-E DRY 195 contain an internal condensate pump capable of lifting condensate 17 feet and 20 feet of condensate hose.
- Wiring is through a factory installed six foot power cord; 115
  volt with ground.

"There was an excess amount of humidity in the building...within 3 days, the humidity was under control"

Mark D. Simon, Water Superintendent, City of Brookfield, WI

"After fighting humidity problems in our water treatment facilities for many years, we purchased two HI-E DRY units. We placed one unit in the pipe basement and the other unit in the detention and filter room. These rooms were dry within two days and we were actually able to paint in these rooms in the middle

Jerry D. Boyer, Field Manager Southern Sioux County Rural Water System

of the summer."

<sup>\*</sup>Specifications subject to change without notice

#### **Low Unit Cost**

HI-E DRY dehumidifiers utilize heat transfer innovations that dramatically improve performance. This enables Therma-Stor Products to build higher capacity dehumidifiers with smaller refrigeration systems. That results in lower equipment cost.

#### **Low Installation Cost**

A smaller refrigeration system requires a smaller electrical load. The HI-E DRY model 195 removes over 183 pounds of water a day (80°F 60% RH) while drawing only twelve amps of electricity. The HI-E DRY 195 plugs into a 115 volt 15 amp outlet, and provides all the humidity control necessary for a 440 square foot pool. (82°F Air Temp., 80°F Water Temp. 60% Relative Humidity)

#### **Low Operating Cost**

HI-E DRY dehumidifiers remove two to three times more water per kilowatt hour of electricity than conventional dehumidifiers. Annual energy savings from controlling the humidity of a 440 square foot pool would be about 15,000 KWH., or \$1,200.00 at \$0.08 KWH.

## **Applications**

HI-E DRY dehumidifiers control damaging moisture and humidity in a wide range of applications. Designed to operate in a variety of conditions, HI-E DRY dehumidifiers will reduce the relative humidity of inlet air with a dew point above 35°F. The ability to function effectively in lower temperatures is built into every HI-E DRY dehumidifier. Under all conditions, the lower operating cost, lower unit cost, and availability of high capacity "plug-in" installation on most models, make HI-E DRY dehumidifiers the right solution to most humidity problems.

Therma-Stor Products was established in 1977 to apply heat transfer innovations to residential and commercial markets. Heat recovery water heating systems, ventilation systems, and dehumidifiers comprise Therma-Stor's primary products. Therma-Stor has received the Wisconsin Society of Professional Engineers Governor's New Product Award and the U.S. Department of Energy's Award for Energy Innovation.
