

How the NovelAire Comfort Wheel™ works

The revolutionary new technology of NovelAire's Comfort Wheel is specifically designed to maximize moisture removal and comfort in your home. The Comfort Wheel rotates slowly while simultaneously absorbing the moisture from your home. The moisture-laden wheel then rotates into the outdoor air stream where the unwanted, excess moisture is discharged outdoors. This energy efficient process provides **greater comfort** and **lower cooling bills**.

At NovelAire Comfort Products, we specialize in creating the great indoors™. To experience the great indoors in your home, call NovelAire Comfort Products today.

advanced humidity control

Breakthrough humidity control technology.

NOVELAIRE *Comfort* PRODUCTS
creating the great indoors™

creating the great indoors™

Within your home, memories are made, traditions are born, and the stresses of the world seem to slip away. Your home is your sanctuary and you deserve to relax in complete comfort indoors, regardless of what Mother Nature is delivering outdoors.

Excess moisture in your home can increase the spread of mold, dust mites and mildew that are detrimental to the comfort and health of your family. **NovelAire's ComfortPlus™ 300 dehumidifier** is designed specifically to enhance your home's comfort and indoor health environment. The unit combines the technology and benefits of both desiccant dehumidification and traditional cooling to achieve the most energy efficient and complete air conditioning system available to the residential market. **NovelAire Comfort Products** is committed to creating the great indoors for you and your family.

energy savings

NovelAire's **unique dehumidification system** allows you to control the humidity in your home, independently from the temperature. This means the thermostat can be set to a higher temperature, saving energy, without sacrificing comfort. Significant energy can be saved by maintaining this increased temperature and comfort range. This is especially helpful in the Spring and Fall when humidity is frequently high, but the temperatures are too low to activate the air conditioning. In these cases, the ComfortPlus 300 dehumidifier would take over on its own, controlling the humidity, without having to turn on the air conditioning.

choose your comfort level

Excess moisture causes mold to flourish. When this occurs there is an increased risk of potential health problems such as allergies, asthma, bronchitis, and other illnesses. Controlling the moisture is key to stopping indoor mold and other allergen growth while creating a cleaner, healthier home environment for your family. With NovelAire's ComfortPlus 300, **you control the level of humidity and temperature in your home independently.** Maintaining the relative humidity at about 50% is best for controlling mold growth, dust mites, and allergens. Simply set the programmable humidistat to your desired comfort level, sit back, and breathe easy.

Excess humidity also makes your home's indoor air uncomfortable and sticky, and you may find yourself lowering the thermostat to remedy that discomfort. NovelAire's ComfortPlus 300 removes the harmful excess humidity throughout your home, **maintaining the quality of your belongings** and more importantly, providing a comfortable and healthy indoor environment in an efficient manner.
