

## Drum Assembly Instructions

Instructions for #1325, #1425, #2040 and #2415 Drum Assemblies for Humidifier Models 465, 447, 2000 and 1400 respectively.

When installing a new drum assembly (or even a new evaporator pad) it is a good idea to clean out the water reservoir.

1. Turn off the electric and water supplies to the unit, drain the water from the unit and follow the instructions in your owner's manual for disassembly.
2. Remove the old drum assembly:
  - a) Model 447: Lift open end out of its cradle and slide drum off of motor shaft.
  - b) Model 465: Remove drum retainer from wire cradle, lift drum out of cradle and slide off of motor shaft. (Older units do not have a drum retainer).
  - c) Model 1400: Depress center section of wire cage at open end of drum assembly until it comes out of the end bearing. Then slide drum off of motor shaft.
  - d) Model 2000: Lift shaft end of assembly out of its cradle and slide drum assembly off of motor shaft.
3. Clean out complete humidifier.
4. Install the new drum assembly by reversing the appropriate step in #2 above.
5. Re-assemble humidifier per the owner's manual and turn on the electric and water supplies to the unit.
